

## RY-EPDM SERIES WEATHER SEALING STRIP FOR BRIDGE ALUMINIUM

RY-EPDM series weather sealing strip realize seamless corner joining process, sealing effect is more excellent. The combination of dense and foam technology, reasonable design will achieve the best heat preservation and sound insulation effect. Excellent aging-resistant materials can be adapted to a variety of working environments. A variety of production processes, can provide the best design in a timely manner. Colorful raw materials can be produced to meet a variety of design needs.

Working temperature in  $-40^{\circ}\text{C}$ - $150^{\circ}\text{C}$

Service life can reach more than 25 years

Thermal and acoustic insulation to the extreme

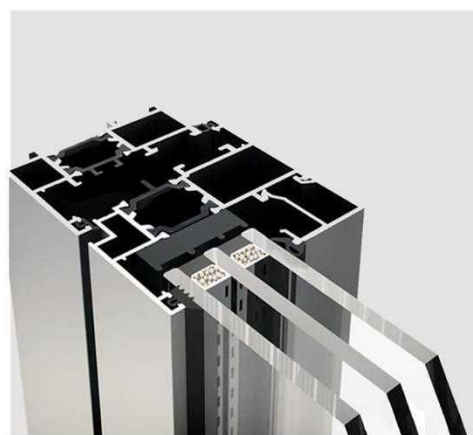

Clip line production to prevent transition stretching

Seamless corner joining process for better sealing effect

Resistant to aging and adaptable to a variety of working environments

Multiple production processes provide optimal design solutions

Seamless corner joining process for better sealing effect
