

RY-EPDM SERIES WEATHER SEALING STRIP FOR ALUMINUM-CLAD WOOD DOOR AND WINDOW

RY-EPDM series aluminum alloy coated wooden door and window waterproof seal strip can realize seamless corner joining process and better sealing effect. The combination of dense and foam technology, reasonable design will maximize the effect of heat preservation and sound insulation. Excellent aging-resistant materials, adaptable to a variety of working environments. A variety of production processes, can provide the best design program in a timely manner.

Working temperature in -40°C - 150°C

Service life can reach more than 25 years

Thermal and acoustic insulation to the extreme

Clip line production to prevent transition stretching

Seamless corner joining process for better sealing effect

Resistant to aging and adaptable to a variety of working environments

Colors can produce colored raw materials, avoiding a single black product

Excellent workmanship, thermal and acoustic insulation to the extreme

Seamless corner joining process for better sealing effect
